

Fraser River Sockeye In-season Update – Aug 7, 2026

The below is a summary of the August 7 Fraser Panel Meeting. For specific details please refer to the attached Fraser Panel distribution from the call. This is the ninth in-season meeting of 2026. Mission hydroacoustic and all fisheries are operational and continuing to track below expectations however, some recent positively has been observed. Marine gillnet test fisheries have concluded for the season, with seiners still operational. Early Stuarts are largely through the lower river with spawning surveys continuing this week. Early Summers continue to track well below expectations and on July 31 an in-season run size of 200,000 with a run timing of Aug 4 was adopted by the panel. Summers are also tracking below expectations for this time of year but have seen some recent positivity in marine catches. Water temperatures are near the median but expected to increase throughout the weekend, and discharge remains low. No other changes to pre-season estimates of abundance, timing or management adjustments were recommended at today's meeting. If you have any questions or notice any errors in the summary please contact colin.schwindt@dfo-mpo.gc.ca so I can make adjustments.

2026 Run status of Fraser sockeye and pink salmon

Date: Aug. 7, 2026

The information presented in this distribution has been prepared by PSC Secretariat staff and should be considered preliminary until reviewed by the Fraser River Panel

Week of: Aug. 2 - Aug. 8, 2026	Sockeye				
	Management Group				Total Fraser
	E.Stuart	E.Summer	Summer	Late	
Mission passage (incls Pitt, Alouette, Coquitlam)	45,900	90,500	188,100	10,600	335,100
Catch downstream of Mission	100	5,200	17,000	3,600	25,900
Accounted Run To Date	46,000	95,700	205,100	14,200	361,000
Adopted In-season run size ¹	46,000	200,000	na	na	0
Pre-season run size	62,670	1,163,680	4,304,780	2,212,260	7,743,390
Area 20 timing adopted in-season	1-Jul	4-Aug	na	na	na
Area 20 timing expected pre-season	4-Jul	3-Aug	13-Aug	20-Aug	14-Aug
Johnstone Str. Diversion Rate					
In-season 5-day average					16%
Preseason forecast of annual rate					67%

¹ In-season run sizes are usually not adopted until after the peak of the run has passed through marine test fishery areas in Juan de Fuca and Johnstone straits.

- Total run accounted to date is 361,000 Fraser Sockeye, the majority of which are now Summers with Lates building in marine areas.
- Early Summers are tracking well below expectations, including both Nadina and Early Thompsen stocks, two groups expected to make up the majority of the MU.
- The median forecast for Early Summers was 1.16M and on July 31 the panel adopted a downgraded, in-season run size estimate of 200K, close to the p10 forecast and in a LAER.
- Summers are showing mixed early results but appear to be building in marine areas. Late Stuart/Stellako are tracking well below expectations while Chilko, Quesnel are tracking between p25 and p50

- The in-season 5-day average diversion rate is 16% through Johnstone Strait.

Assessments and Recommendations

Early Stuarts

- An in-season run size of 46,000 with a pMA of 1.08 and an Area 20 run timing of July 1 was adopted on July 17.

Early Summers

- An in-season run size of 540,000 with a pMA of 0.27 and an Area 20 run timing of August 5 was adopted on July 28.
- Early Summer run size continued decline and updated in-season run size of 200,000 with a run timing of Aug 4 was adopted on July 31.

Summers

- No changes to pre-season estimates

Lates

- No changes to pre-season estimates

Management Group	Run Size	Timing A20 50%date	Proportional Mngt. Adjust. ^a	Available Harvest ^b	Allowable Incidental Harvest ^c
Early Stuart (Pre-Season)	63,000	4 July	1.08	0	6,300
Early Stuart (Adopted In Season)	46,000	July 1	1.08	0	4,600
Early Summers (Pre-Season)	1,164,000	31 July	0.27	573,000	N/A
Early Summers (Adopted In Season)	200,000	Aug 5	0.27	0	40,000
Summer (Pre-Season)	4,305,000	10 Aug	0.30	2,467,000	N/A
Summer (Adopted In Season)	No Change	No Change	No Change	0	No Change
Late (Pre-Season)	2,212,000	17 August	0.43	477,000	N/A
Lates (Adopted In Season)	No Change	No Change	No Change	0	No Change

^a Proportional Management Adjustment is multiplied by the escapement target to calculate the numerical management adjustment.

^b Available harvest after deductions. Harvest includes all catch in all fisheries in Canada the United States and test fisheries. CTAC will be assessed in-season.

^c Incidental allowable harvest in a LAER scenario. Incidental harvest is not a target and would be considered a maximum, includes test fishery catch and may include fishery induced mortalities.

Fishery Recommendations

- FSC fisheries opened July 22 until August 5 in all marine areas (Areas 18 & 29-1 to 29-6 only open as of July 26) and paused Aug 5.
- Small-scale FSC fisheries began in the lower river on July 26 and 28 continued through the long weekend until August 4.
- No formal fishery recommendations were provided on Aug 7; however, it is expected that US C&S fisheries will begin Aug 8 in US panel water

Other Business

Next Meeting

- Next Panel meeting is Aug 11, 2026.
- Next Panel Tech meeting is Aug 13, 2026.
